The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).					
Status					
1) Responsive to communication(s) filed on					
	—· s action is non-final.				
1	nce this application is in condition for allowance except for formal matters, prosecution as to the merits is

Art Unit: 2863

DETAILED ACTION

Claim Objections

Claims 1 and 2 are objected to because of the following informalities: No transitional phrase. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1 and 2 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

With respect to claim 1, it is indefinite and unclear to state the method of determining the ratios between the distance lengths of bearings of machines and apparatus and the ratios of the distance length of arbitrarily chosen two correction planes without the test runs.

With respect to claim 2, it is indefinite and unclear to state the computers, measuring instruments and testing facilities, which are directly or indirectly applied or equipped.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Art Unit: 2863

Claims 1 and 2 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

With respect to claims 1 and 2, the method does not produce a tangible result. It is unclear how the vector calculation process is achieved and whether the result is being stored, displayed, or used in any tangible manner.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Graves et al. (US 5,689,543).

With respect to claim 1, Graves discloses the calculating method to determine the dynamic unbalance in rotors by the vector calculation which is using with the ratios between the distance lengths of bearings (26) of machines (10) and apparatus (Column 3, lines 55-61) and the ratios of the distance length of arbitrarily chosen two correction planes (28 and 30) without the test runs attached with trial masses, based on the data consist of magnitudes and directions for the vibration vector quantities of displacement (Column 4, lines 25-34), velocity, or acceleration (Column 4, lines 33, 49 and 52)which originated in dynamic unbalance in rotor, and which are measured at the two bearings (26) of the rotating machines (10) or dynamic balancing machines (10).

Art Unit: 2863

With respect to claim 2, Graves discloses the computers, measuring instruments and testing facilities, which are directly or indirectly applied or equipped the calculating method to determine the dynamic unbalance in rotor with the vector calculation (10).

Conclusion

The following prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Schonfeld (US 4,891,981), Gasch et al. (US 5,406,846), and Lyman et al. (US 3,952,602).

Fax/Telephone Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cindy D. Khuu whose telephone number is (571) 272-8585. The examiner can normally be reached on M-F, 8:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Barlow can be reached on (571) 272-2269. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
